## **Appendix: Declaration of Conformity**

# 1. Basic Safety Instructions

## 1.1 Notes on this manual

**Please read carefully before commissioning the devices.**

The user manual is a constituent part of the product. It must be kept in the direct vicinity of the device and accessible at all times to installation, operating and maintenance personnel.

It contains important notes, safety instructions and test certificates which are necessary for perfect functioning when the devices are being operated and handled.

The user manual is written for all people who carry out assembly, installation, commissioning and maintenance work on the product, whereby the directives and standards applicable to areas with a gas or dust atmosphere (99/92/EC, EN 60079-17, EN 60079-19) must be observed when doing such work.

Familiarity with and strict adherence to the safety instructions and warnings in this manual are essential for safe installation and commissioning. Careful handling and consistent observation of these instructions can prevent accidents, personal injuries and damage to property.

The illustrations in these operating instructions serve to make the information and descriptions more clear. They are not necessarily true to scale and may deviate slightly from the actual construction of the device.

Safety instructions and warnings are specially highlighted in this manual and marked by symbols.

### **DANGER**

**DANGER** indicates a hazardous situation which, if not avoided, will result in death or serious injury.

### **WARNING**

**WARNING** indicates a hazardous situation which, if not avoided, could result in death or serious injury.

### **CAUTION**

**CAUTION** indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

### **ATTENTION**

**ATTENTION** identifies a potentially damaging situation which, if not avoided, could damage the equipment or something in its environment.

Important instructions and information on effective, economical and environmentally compatible handling.

### **1.1.1 Languages**

The original user manual is written in German. All other available languages are translations of the original user manual.

The user manual is available in German and English. If you require any other languages, please ask BARTEC or request them when placing the order.

### **1.1.2 Changes to the document**

BARTEC reserves the right to alter the contents of this document without notice. No guarantee is given for the correctness of the information. In case of doubt, the German safety instructions shall apply because it is not possible to rule out errors in translation or in printing. In the event of a legal dispute, the "General Terms and Conditions" of the BARTEC group shall apply in addition.

The respective up-to-date versions of data sheets, manuals, certificates, EC Declaration of Conformity may be downloaded at [www.bartec-group.com](http://www.bartec-group.com) under products and solutions in the area "Automatic Technology" or ordered directly from BARTEC GmbH.

## **1.2 Handling the Product**

The product described in these operating instructions has been tested and left the factory in perfect condition as regards meeting safety requirements. To maintain this condition and ensure that this product operates perfectly and safely, it may be used only in the manner described by the manufacturer. Appropriate transportation, suitable storage and careful operation are also essential for the perfect and safe operation of this product. The POLARIS must be installed properly and securely if it is to work perfectly and correctly.

The safe and perfect mounting of the POLARIS is a precondition for faultless and correct operation.

## **1.3 Use in Accordance with the Intended Purpose**

### **1.3.1 Exclusive Purpose**

It is used exclusively in combination with operating devices which satisfy the requirements for Overvoltage Category I.

The POLARIS REMOTE Zero Client series have been designed specially for use in hazardous (potentially explosive) areas in Zone 2 and Zones 22. It is essential to observe the permissible operational data for the device being used.

### **1.3.2 Improper Use**

Any other use is not in accordance with the intended purpose and can cause damage and accidents. The manufacturer will not be liable for any use beyond that of its exclusive intended purpose.

## 1.4 Owner's/Managing Operator's Obligations

The owner/managing operator undertakes to restrict permission to work with the POLARIS to people who:

- ▶ are familiar with the basic regulations on safety and accident prevention and have been instructed in the use of the POLARIS;
- ▶ have read and understood the documentation, the chapter on safety and the warnings.

The owner/managing operator must check that the safety regulations and accident prevention rules valid for the respective application are being observed.

## 1.5 Safety Instructions

### 1.5.1 General Safety Instructions

- ▶ Take the device out of the hazardous area before wiping it with a dry cloth or cleaning it!
- ▶ Do not open devices in a hazardous area.
- ▶ The general statutory regulations or directives relating to safety at work, accident prevention and environmental protection legislation must be observed, e.g. the German industrial health and safety ordinance (BetrSichV) or the applicable national ordinances.
- ▶ In view of the risk of dangerous electrostatic charging, wear appropriate clothing and footwear.
- ▶ Avoid the influence of heat that is higher or lower than the specified temperature range.
- ▶ Protect the device from external influences! Do not expose the device to any caustic/aggressive liquids, vapours or mist! In the event of malfunctioning or damage to the enclosure, take the device out of the potentially explosive area immediately and bring it to a safe place.

## 1.6 Safety Instructions for Operation

### 1.6.1 Upkeep

For electrical systems the relevant installation and operating regulations must be complied with (e.g. Directive 99/92/EC, Directive 94/9/EC and the national applicable ordinances, EN 60079-14 and the DIN VDE 0100 series)!

The disposal of this equipment must comply with the national regulations on the disposal of waste.

### 1.6.2 Maintenance

Regular servicing is not necessary if the equipment is operated correctly in accordance with the installation instructions and environmental conditions. In this context, please refer to Chapter "Maintenance, Inspection, Repair".

### 1.6.3 Inspection

Under EN 60079-17 and EN 60079-19, the owner/ managing operator of electrical installations in hazardous areas is obliged to have these installations checked by a qualified electrician to ensure that they are in a proper condition.

### 1.6.4 Repairs

Repairs on explosion-protected operating equipment may be done only by authorised persons working in accordance with the latest developments in technology and using original spare parts. The applicable regulations must be observed.

### 1.6.5 Commissioning

Before commissioning, check that all components and documents are there.

## 1.7 Ex Protection Type, Certification and Standards

Markings specifying Ex protection and certification are put on the device. For Ex protection markings, see Chapter 3 "Technical Data".

The POLARIS REMOTE Zero Clients conform to Directive 94/9/EC for devices and protective systems for use to their intended purpose in potentially explosive areas (ATEX Directive). For the standards conformed to, see Chapter 3 "Technical Data".

## 1.8 Warranty

### WARNING

**It is not permissible to make any modifications or implement any conversions unless the manufacturer gives his approval in writing.**

If components other than those specified are used, protection against explosion can no longer be assured. It cannot be guaranteed that parts procured from other suppliers have been designed and produced in conformance to safety requirements and with the necessary stress tolerance.

- Contact the manufacturer to obtain approval before making any modifications or conversions. Use only original spare parts and original expendable parts.

The manufacturer grants a complete guarantee only and exclusively for the spare parts ordered from him, the manufacturer.

As a fundamental rule, our "General Conditions of Sale and Delivery" apply. These are made available to the owner/managing operator at the latest on formation of a contract. Guarantee and liability claims for personal injury and damage to property are excluded if they are due to one or more of the following reasons:

- ▶ use of the POLARIS for a purpose other than that for which it is intended.
- ▶ incorrect installation, commissioning, operation and maintenance.
- ▶ non-compliance with the instructions in the manual with respect to transport, storage, assembly, commissioning, operation and maintenance.
- ▶ structural modifications without our prior authorisation.
- ▶ inadequate monitoring of components that are subject to wear
- ▶ repairs done incorrectly.
- ▶ disasters due to the effects of foreign matter or Act of God (events outside human control).

We guarantee the POLARIS and its accessories for a period of 1 year starting on the date of delivery from the Bad Mergentheim factory. This guarantee covers all parts of the delivery and is restricted to the replacement free of charge or the repair of the defective parts in our Bad Mergentheim factory. As far as possible, the delivery packaging should be kept for this purpose. In the event of such a claim, the product must be returned to us after written arrangement. The customer cannot claim to have the repairs done at the site of installation.

## 2. Product Description

### 2.1 Definition

The **POLARIS Zero Client** series is the modern safe Remote HMI series for the potentially explosive area in Zone 2 and Zone 22.

Using the Ethernet interface of the POLARIS Zero Client individual computers or network devices can be connected to an existing local network (LAN). The Ethernet connection can be made via copper.

The pre-installed operating system of the POLARIS Zero Client is based on Windows 7 Embedded. The POLARIS series has been primarily conceived for front installation.

Touchscreen and high quality keyboards in different national languages and different mouse versions extend the operating comfort.

*Illustration 1: Keyboard with Trackball*

The front-panel mounting design makes installation easy. On request, the devices are also available as a ready-made system solution in a stainless steel enclosure for wall, floor or table mounting.

For particularly harsh areas of use with temperatures as low as down to -40 °C, we equip the POLARIS series with electrical heating. On request, we produce customised solutions with more command and signalling devices.

*Illustration 2: Turn-key system solution in stainless steel enclosure "Exclusive"*

## 2.2 Focus on security

With the POLARIS Zero Client the focus is on security.

The Zero Client Shell developed by BARTEC with its user friendly tile structure has been designed to avoid any dangers originating from the user or the network.

*Illustration 3: BARTEC Zero Client user mode*

The functionalities of the POLARIS devices have been kept to a minimum: registering on the server is automated for the operator through pre-configuration and he is only provided access to those functions he requires for his work. These functions are selected by “touching” a tile. All in all, the Zero Client Shell has two modes: user mode and administrator mode. The user mode is the minimum configuration required for the work processes of the user. This mode is active as standard when the device is booted.

In the administrator mode, all available settings can be configured for use, hardware and system. In this mode, the device is set up for the specific network environment, for example. Changing between modes is limited in time. This area is also password-protected. The password can be changed and reset by the administrator.

After connection via the RTP protocol, the visualisation application on the server takes care of the further security tasks at user level. The operating system is also reduced such that data carriers cannot be used by the USB interface because they are blocked. An intrinsically safe USB mouse and USB keyboard can be used for service purposes, however. In addition to hazards originating from the user, the network is also a source of danger via which viruses, Trojans or similar programs attempt to infect the devices with malware.

However, since the Zero Clients are invisible in the network and all server services are deactivated which would make the device responsive on the network side, cyber-attacks are effectively prevented. The only protocol which is admitted is the RTP protocol which is required for the remote function. The Enhanced Write Filter (EWF) available for the embedded system is activated as standard on the devices. It prevents any physical write access to the system partition of the data carrier installed. Any data written on the system partition are no longer available when the system is rebooted because they are deleted when the system is switched off.

### 3.1.2 General data

<b>Construction</b>	Front panel fitting; Optional turn-key system solutions in a stainless steel enclosure as wall, floor or table mounting versions.
<b>Operating system</b>	Zero Client proprietary Windows® 7 Embedded
<b>Interface</b> (basic version)	1 x Ethernet 100/10BaseT 1 x USB socket, type A (power limited) 1 x USB on terminal 2 x PS/2 for POLARIS, zone 2, keyboard and mouse
<b>Display</b>	Antireflection coating glass pane Optional touchscreen
<b>Power supply</b>	AC 90 V to 253 V $\pm$ 10 %, 50 Hz to 60 Hz DC 24 V $\pm$ 10 %
<b>Max. power consumption</b>	$P_{\max} < 100$ W depending on the version
<b>Relative air humidity</b>	5 to 95 % non-condensing
<b>Vibration</b>	0.7 G/1 mm; 5 Hz-500 Hz pulse in all 3 axes
<b>Schock</b>	15 G, 11 ms pulse in all 3 axes
<b>Material</b> Front  Rear panel	Polyester foil on anodised aluminium plate (conditionally UV-resistant) galvanised sheet steel, bichromated
<b>Protection class</b> Front Rear site	IP65 IP54
<b>Optional approved accessories</b>	Keyboard Mouse variants Memory stick

### 3.1.3 Characteristics POLARIS Zero Client 12.1" W

<b>Display</b>	12.1" W graphics-capable TFT display WXGA resolution 1280 x 800 pixels 262,144 colours Brightness 400 cd/m <sup>2</sup> Visible surface approx. 246 x 166 mm Contrast 1200:1
<b>Backlighting</b>	LED technology, Service life approx. 50,000 hours (at +25 °C)
<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +50 °C 0 °C to +50 °C
<b>Power supply</b>	DC 24 V ±10 %
<b>Dimensions</b> (width x height x depth)	400 mm x 246 mm x approx. 130 mm
<b>Wall cut-out</b> (width x height)	386 mm x 226 mm ± 0.5 mm
<b>Weight</b>	approx. 8 kg

### 3.1.4 Characteristics POLARIS Zero Client 15" / POLARIS Zero Client 15" Sunlight

<b>Display</b>	15" graphics-capable TFT display XGA resolution 1024 x 768 pixels 16.7 million colours Brightness 350 cd/m <sup>2</sup> Brightness 1000 cd/m <sup>2</sup> (suitable for daylight) Visible surface approx. 304 x 228 mm Contrast 700:1
<b>Backlighting</b>	LED technology, Service life approx. 50,000 hours (at +25 °C)
<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +50 °C 0 °C to +50 °C
<b>Power supply</b>	AC 90 V to 253 V ± 10 %, 50 Hz to 60 Hz DC 24 V ± 10 %
<b>Dimensions</b> (width x height x depth)	411 mm x 332 mm x approx. 135 mm
<b>Wall cut-out</b> (width x height)	394.5 mm x 315.5 mm + 0.5 mm
<b>Weight</b>	approx. 12 kg

#### POLARIS Zero Client 15" Sunlight

Extended ambient temperatures:

<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +60 °C -20 °C to +60 °C
--	--------------------------------------

### 3.1.5 Characteristics POLARIS Zero Client 17.3"

<b>Display</b>	17.3" graphics-capable TFT display WSXGA resolution 1920 x 1080 pixels 16.7 million colours Brightness 400 cd/m <sup>2</sup> Visible surface approx. 382 x 215 mm Contrast 600:1
<b>Backlighting</b>	CFL technology, Service life approx. 50,000 hours (at +25 °C)
<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +50 °C 0 °C to +50 °C
<b>Power supply</b>	AC 90 V to 253 V ± 10 %, 50 Hz to 60 Hz DC 24 V ± 10 %
<b>Dimensions</b> (width x height x depth)	503 mm x 314 mm x approx. 135 mm
<b>Wall cut-out</b> (width x height)	489 mm x 301 mm + 0.5 mm
<b>Weight</b>	approx. 15 kg

### 3.1.6 Characteristics POLARIS Zero Client 19.1"

<b>Display</b>	19.1" graphics-capable TFT display SXGA resolution 1280 x 1024 pixels 16.2 million colours Brightness 300 cd/m <sup>2</sup> Visible surface approx. 380 x 305 mm Contrast 1300:1
<b>Backlighting</b>	CFL technology, Service life approx. 40,000 hours (at +25 °C)
<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +50 °C 0 °C to +50 °C
<b>Power supply</b>	AC 90 V to 253 V ± 10 %, 50 Hz to 60 Hz DC 24 V ±10 %
<b>Dimensions</b> (width x height x depth)	498 mm x 400.5 mm x approx. 135 mm
<b>Wall cut-out</b> (width x height)	484 mm x 386.5 mm + 0.5 mm
<b>Weight</b>	approx. 15 kg
Below +10 °C the unit has to be heated in order to guarantee the lifetime of the backlight illumination.	

### 3.1.7 Characteristics POLARIS Zero Client 24"

<b>Display</b>	24" graphics-capable TFT display WSXGA resolution 1920 x 1080 pixels 16.7 million colours Brightness 300 cd/m <sup>2</sup> Visible surface approx. 521 x 299 mm Contrast 3000:1
<b>Backlighting</b>	LED technology, Service life approx. 40,000 hours (at +25 °C)
<b>Permissible ambient temperature</b> Storage/Transport Operation	-20 °C to +50 °C 0 °C to +50 °C
<b>Power supply</b>	AC 90 V to 253 V ± 10 %, 50 Hz to 60 Hz DC 24 V ±10 %
<b>Dimensions</b> (width x height x depth)	644 mm x 406 mm x approx. 135 mm
<b>Wall cut-out</b> (width x height)	630 mm x 392 mm + 0.5 mm
<b>Weight</b>	approx. 21 kg

## 3.2 Keyboard

### 3.2.1 Explosion Protection

Type	B7-72VZ-40..
Ex protection type ATEX	<div> <div>Ex</div> II 3G Ex nA IIC T4 Gc </div> <div> <div>Ex</div> II 3D Ex tc IIIC T120°C Dc </div>
Standards	EN 60079-0:2009 CORRIGENDUM 1:2010 EN 60079-15:2010 EN 60079-31:2009

### 3.2.2 General Data

Construction	Front panel fitting
Material	Polyester foil on aluminium sheet (conditionally UV-resistant)
Protection class (front)	IP65
Dimensions (width x height)	420 mm x 170 mm
Wall cut-out (width x height)	391 mm x 140 mm
Installation depth	18 mm
Weight	approx. 700 g
Other features	Keyboard available in various languages

Dimensions and wall cut-out for keyboard (mm)

All hole diameter: 3.3 mm

### 3.2.3 Characteristics Enclosure for mouse and keyboard

<b>Order no.</b>	05-0041-0277
<b>Material</b>	Stainless steel 1.4301; AISI 304
<b>Dimensions</b> (width x height x depth)	600 mm x 85 mm x 220 mm
<b>Protection class</b>	IP65
<b>Dimensions (mm)</b> 	

## 3.3 Finger mouse, Trackball, Touchpad and Joystick

### 3.3.1 Explosion protection

<b>Ex protection type ATEX</b>	II 3G Ex nA IIC T4 Gc II 3D Ex tc IIIC T120°C Dc
<b>Standards</b>	EN 60079-0:2009 CORRIGENDUM 1:2010 EN 60079-15:2010 EN 60079-31:2009

### 3.3.2 General Data

<b>Construction</b>	Front panel fitting
<b>Material</b>	Polyester foil on aluminium sheet (conditionally UV-resistant)
<b>Protection class</b>	
<b>Fingermouse/Joystick/Touchpad</b>	IP65 front site
<b>Trackball</b>	
Static	IP65 front site
Dynamic	IP56 front site
<b>Dimensions</b> (width x height)	130 mm x 170 mm
<b>Wall cut-out</b> (width x height)	100 mm x 140 mm

Dimensions and wall cut-out (mm)

All hole diameter: 3.3 mm

### 3.3.3

#### Variants

##### Finger mouse

Type	17-71VZ-1000
Installation depth	15 mm
Weight	approx. 270 g

##### Touchpad

Type	17-71VZ-2000
Installation depth	15 mm
Weight	approx. 250 g

##### Trackball

Type	17-71VZ-3000
Installation depth	43 mm
Weight	approx. 500 g

##### Joystick without button

Type	B7-72VZ-8000
Installation depth	43 mm
Weight	approx. 500 g

##### Joystick with button

Type	17-71VZ-9000
Installation depth	43 mm
Weight	approx. 500 g

## 3.4 Product Labelling

<p><b>A</b></p> <p><b>Example:</b>  <b>Type label with label</b>  <b>ATEX</b></p>	
<p><b>B</b></p> <p><b>Warnings on the device</b></p>	
<p><b>C</b></p> <p><b>Licence sticker</b></p>	
<p><b>D</b></p> <p><b>Test sticker</b></p>	

## 4. Transport, Storage, Scope and Assembly

### 4.1 Transport

A written report of any transport damage or missing items must be given to the appointed forwarder and to BARTEC GmbH immediately on receipt of the delivery.

Damage caused by incorrect storage and transport shall not fall within the warranty provisions of BARTEC GmbH.

#### **CAUTION**

This device is heavy (8-21 kg).

There is a risk of injury if it is lifted or moved incorrectly.

- ▶ Two people are needed for assembly/disassembly.

### 4.2 Intermediate Storage

#### **ATTENTION**

Damage to property through incorrect storage!

- ▶ Comply with the correct storage temperatures.
- ▶ Keep the POLARIS free of moisture.

### 4.3 Scope of delivery

- 1 x POLARIS REMOTE Zero Client for Zone 2 / 22
- 1 x Reinforcement frame
- 1 x Set of mounting clamps
- 1 x User manual POLARIS REMOTE Zero Client for Zone 2 / 22

#### 4.3.1 Accessorial optional

- |                      |   |
|----------------------|---|
| <b>Optional:</b>     | Keyboard, finger mouse, touchpad, trackball, joystick<br>Enclosure and supporting system for wall, floor and table mounting |
| <b>Not enclosed:</b> | Assembly material<br>Cable for voltage supply and data line(s)  |

## 4.4 Assembly

Before assembling the device, make sure you have all the components and documents.

<b>Required Tools:</b>	POLARIS (mounting clamps)	1 x hex key 3 mm 1 x slotted screwdriver
	POLARIS termination compartments	1 x hex key 2.5 mm 1 x slotted screwdriver
	POLARIS PE connection	1 x ring spanner 7 mm
	POLARIS accessories	1 x socket wrench 5.5 mm
	System solution in an "Exclusive" enclosure	1 x hex key 5 mm (to fix the supporting system in place)

### 4.4.1 Installation options

The POLARIS can be installed directly in:

- Enclosures
- Switch cabinet doors
- Operating consoles

POLARIS REMOTE Zero Clients are mounted by fitting them into front panels, which can be done with very little effort. On request, we supply the operating devices as ready-to-use system solutions in stainless steel enclosures for mounting onto walls, floors or tables.

*Illustration 6: Examples of floor, wall and table mounting*

## 5. Installation

We recommend setting up and testing the entire system before its ultimate installation in the ex-area. If a long connection cable is not available, please use a patch cable to test the basic functions.

### DANGER

**Electrostatic charging through a stream of particles.**

**There is a risk of fatal injury in an explosive atmosphere!**

- ▶ Make sure there are no highly energetic charging mechanisms at the user interface on the display unit or its accessories.
- ▶ Do not install the device in the stream of particles.

### DANGER

**No PE connection. Risk of fatal injury in an explosive atmosphere!**

- ▶ The POLARIS must be integrated in the equipotential bonding.

The POLARIS Series is approved for an ambient temperature of from 0 °C to +50 °C or from -20 °C to +60 °C and a relative air humidity of from 5 to 95 % without condensation.

### 5.1 Requirements

- The place where the POLARIS is installed must have sufficient mechanical stability/fastening.
- The enclosure intended for accommodating the POLARIS must be designed to bear the device's weight.
- If a supporting system is used, the surface underneath and the means of fastening the supporting system must be designed to bear the weight of the POLARIS.
- Choose the optimum height for operating the POLARIS.
- Ensure good lighting conditions for a perfectly legible display (no direct exposure to the sun's rays).
- Do not mount in direct proximity to switching or current changing devices.
- Only install the POLARIS in conjunction with the reinforcement frame in an IP65 enclosure. Failure to comply with this can lead to water penetrating and damaging the device.

**POLARIS with CFL backlighting:**

- The POLARIS must be heated when at temperatures below 0 °C. We furthermore recommend protecting the display from the cold, e.g. with a door on the front of the enclosure.
- The POLARIS should be heated when at temperatures below +10 °C to avoid the service life of the backlighting being curtailed.

**Outdoor installation****ATTENTION****Damage from condensation or overheating!**

- ▶ Avoid direct sunlight!  
Remedy: e.g. shelter with sufficient air circulation.
- ▶ Remove condensation on the POLARIS immediately.
- ▶ A POLARIS built into an enclosure must be heated and not removed from the mains.
- ▶ Equip the protective housing with breather.

## 5.2 Mechanical Installation

### **CAUTION**

This device is heavy (8-21 kg).

There is a risk of injury if it is lifted or moved incorrectly.

- Two people are needed for assembly/disassembly.

Only qualified personnel, i.e. trained skilled specialists will have the necessary specialised know-how to be able to perform all the mechanical work. Familiarity with and the technically perfect implementation of the safety instructions described in this manual are preconditions for safe installation and commissioning.

### **DANGER**

**Sealed locking screw! The device is closed in the factory.**

**The explosion protection is lost if opened, and danger to life exists in an explosive atmosphere!**

- Do not open the locking screw!

Illustration 7: Rear panel POLARIS

### 5.2.1 Installation in 3G-/3D enclosure

In order to guarantee the IP degree of enclosure protection = IP54 for installation in 3G enclosures of Ex e type of protection (e.g. control equipment), and = IP6X for installation in 3D enclosures in areas where combustible dusts exist - with "protection through the enclosure" type of protection - the reinforcement frame should be used for fastening on the front side. A reinforcement frame is inserted between the retaining brackets and the enclosure material for good transmission of the clamping force. This ensures even transmission of force.

#### **⚠ DANGER**

**If there is no reinforcement frame, it will not be possible to maintain the IP protection in 3G-/3D enclosures. There is a risk of fatal injury in an explosive atmosphere!**

- ▶ Only use enclosure with at least 2 mm wall thickness.
- ▶ Insert the reinforcement frame between the holder and the enclosure.

#### **Reinforcement frame for maintenance of Protection Class IP65**

POLARIS Series 12.1" W	05-0205-0008
POLARIS Series 15" / 15" Sunlight	05-0205-0009
POLARIS Series 17.3"	05-0205-0013
POLARIS Series 19.1"	05-0205-0010
POLARIS Series 24"	05-0205-0012

#### **Work steps:**

- Insert the POLARIS into the cut-out in the enclosure.
- From the back, place the reinforcement frame over the POLARIS.
- Use screws to fasten all mounting clamps onto the POLARIS and tighten the clamping screws evenly.

*Illustration 8: Minimum installation depth and set of mounting clamps*

### 5.2.2 Installation as a System Solution in the Stainless Steel Enclosure

The POLARIS is available as a ready-made system solution in a stainless steel enclosure e.g. the "Exclusive" stainless steel enclosure, for floor, wall or table mounting.

#### Work steps:

- Prepare supply and data line(s).
- Prepare installation on the basis of the drilling template (see illustration 9-11).
- Install supply and data line(s) in the base.
- Fasten the supporting system.
- Pull supply and data line(s) through the cable glands provided into the enclosure. Ensure there is sufficient length.
- Mount the enclosure on the supporting system.
- Open the enclosure and insert the data line(s) through the cable glands and connect up. Close unused cable glands with blanking plugs.

#### For POLARIS built into the enclosure door:

The open door must be supported and secured during the installation and servicing phase. Otherwise the wall thickness specified may lead to the door sagging slightly when open.

- Close the enclosure door.

#### Floor mounting (Stainless steel enclosure "Exclusive")

Illustration 9: Drilling pattern - supporting system for floor mounting

**Wall mounting (Stainless steel enclosure "Exclusive")**

Illustration 10: Drilling pattern - supporting system for wall mounting

**Table mounting swivel/tilt (Stainless steel enclosure "Exclusive")****CAUTION**

**Movable enclosure parts on the swivel-mounted enclosure.**

**There is a risk of injury by hands being crushed.**

- ▶ 3 people are needed for assembly/disassembly.
- ▶ When lifting the POLARIS, always pick up the swivel-mounted adapter and enclosure together.
- ▶ Hold up the POLARIS on both sides (two people), so that the third person can lay the supply and data line(s) in the supporting system. Make sure that your fingers do not get caught between the swivel adapter and the enclosure as you set up the POLARIS.

Illustration 11: Drilling pattern - supporting system for table mounting

## Rotating

- The POLARIS is fixed in position on the supporting system by means of two hexagon socket-head screws (M10) and a handle screw.
- The angle of rotation can be changed once the screws have been loosened.

Tools: hex key 5 mm

Illustration 12: Swivel-mounted adapter

## Inclining

- The POLARIS is fixed in position by means of the two side handle screws.
- The angle of inclination can be changed once both handle screws have been loosened.

Illustration 13: Side handle screw

## 5.3 Electrical Installation

### 5.3.1 Installation guidelines

Only qualified personnel, i.e. trained electricians will have the required specialised knowledge to be able to do all the electrical work.

Familiarity with and the technically perfect implementation of the safety instructions described in this manual are preconditions for safe installation and commissioning.

- The user may do only the wiring at the terminals that are accessible to him/her.
- Any unused cable glands on the terminal compartment should be closed using an approved blanking plug.
- More extensive dismantling work on the device may be done only by the manufacturer or by persons authorised by the manufacturer for this purpose. The device is factory-sealed. Never open it!
- The equipotential bonding connection point must be connected to the equipotential bonding conductor in the hazardous area. Since the protection circuit is galvanically connected to earth, equipotential bonding is required throughout the entire installation.
- The safety and accident prevention regulations applicable to the respective individual case must be observed.
- Devices must be properly installed first before they may be operated.
- It must be possible at all times to disconnect the devices from the voltage supply (in fixed installations by means of an all-pole mains isolating switch or fuse).
- It must be ensured that the supply voltage agrees with the specifications in this user manual and the tolerances must be observed. Use smoothed direct current.
- Malfunctioning cannot be ruled out if levels exceed or drop below the specified tolerances.
- If there is a power failure or if the power supply is interrupted, make sure the system has not been put into a dangerous, undefined condition.
- EMERGENCY STOP mechanisms must remain effective throughout all modes and states of operation.
- Connection cables (particularly data transmission cables) must be selected and laid in a way that ensures that capacitive and inductive interference will not have any adverse effect on the equipment. Appropriate measures must be taken to handle line interruptions to prevent any undefined states occurring.
- Wherever malfunctioning can cause material damage or personal injuries, additional external safety circuits must be provided (e.g. limit switch, mechanical interlocking devices etc.).

## 5.4 Terminal compartments

### **⚠ DANGER**

Sealed locking screw! The device is closed in the factory.

The explosion protection is lost if opened, and danger to life exists in an explosive atmosphere!

- ▶ Do not open the locking screw!

### **⚠ DANGER**

Non-certified cable glands and non-sealed cable entries endanger the IP protection and accordingly the protection against explosions.

There is a risk of fatal injury in an explosive atmosphere!

- ▶ Use Ex-certified cable glands.
- ▶ Close non-sealed cable entries.

Illustration 14: Pin assignment POLARIS

## 5.5 Terminal compartment X1

### 5.5.1 Cable entries

When connecting cables and leads to supplies / communications equipment in the Ex area, Ex certified cable entries must be used which are suitable for the respective type of cable and lead. You must include a suitable sealing element so that an IP rating of at least IP 54 is maintained.

#### **⚠ DANGER**

**Do not connect cables and leads while the power supply is active.**

**Danger to life exists in an explosive atmosphere!**

► Disconnect the device before beginning any work.

### 5.5.2 Supply voltage terminal assignment

Mains Connection Variant AC			
Terminal	Interface	Signal	Remarks
X10	Supply	L	AC 110 - 230 V $\pm$ 10 %
X11	Supply	N	Neutral
X12	Supply	PE	Protective earth
Mains Connection Variant DC 24 V			
Terminal	Interface	Signal	Remarks
X10	Supply	+	DC 24 V $\pm$ 10 %
X11	Supply	-	0 Volt
X12	Supply	PE	Protective earth

### 5.5.3 Ethernet terminal assignment

Configuration Ethernet			
Terminal	Interface	Signal	Remarks
X13	Ethernet	RxD +	10BaseT Receive positive
X14	Ethernet	RxD -	10BaseT Receive negative
X15	Ethernet	TxD +	10BaseT Transmit positive
X16	Ethernet	TxD -	10BaseT Transmit negative

#### Assignment RJ45 plug for Ethernet to POLARIS Zero Client terminal block

Connection RJ45		POLARIS
PIN	Signal	Terminal
1	TX+	X13
2	TX-	X14
3	RX+	X15
4	not used	
5	not used	
6	RX-	X16
7	not used	
8	not used	

#### 5.5.4 USB interface (only for use of USB mouse and USB keyboard)

Configuration USB		
Terminal	Interface	Signal
X17 - X22	not connected	
X23	USB	VCC +5 V
X24	USB	Data- USB data signal
X25	USB	Data+ USB data signal
X26	USB	GND

The individual conductors are colour-coded in a 4-wire USB cable as follows:

	Plug Typ A	Socket Typ A							
	<table border="1"><tr><td>4</td><td>3</td><td>2</td><td>1</td></tr></table>	4	3	2	1	<table border="1"><tr><td>1</td><td>2</td><td>3</td><td>4</td></tr></table>	1	2	3
4	3	2	1						
1	2	3	4						
	Plug Typ B	Socket Typ B							
	<table border="1"><tr><td>1</td><td>2</td></tr><tr><td>4</td><td>3</td></tr></table>	1	2	4	3	<table border="1"><tr><td>2</td><td>1</td></tr><tr><td>3</td><td>4</td></tr></table>	2	1	3
1	2								
4	3								
2	1								
3	4								

Terminal	USB connection	Colour	Function
X23	1	RD	VCC (+5V)
X26	4	BK	GND
X25	3	GN	+ Data
X24	2	WH	- Data

The maximum length of a lead should not exceed 2 m.  
 Maximum current: 500 mA.

## 5.6 Terminal compartment X2

### 5.6.1 Cable entries

When connecting cables and leads to supplies / communications equipment in the Ex area, Ex certified cable entries must be used which are suitable for the respective type of cable and lead. You must include a suitable sealing element so that an IP rating of at least IP 54 is maintained.

#### DANGER

**Do not connect cables and leads while the power supply is active.**  
**Danger to life exists in an explosive atmosphere!**

► Disconnect the device before beginning any work.

**⚠ DANGER**

**Accessories which have not been approved jeopardise the explosion protection.  
 Danger to life exists in an explosive atmosphere!**

► Only use POLARIS accessories!

## 5.6.2 Connection of a keyboard to the POLARIS (optional)

PS/2 for input devices				
Terminal	Interface	Colour	Signal	Remarks
X4	PS/2	WH/BN	VCC	Supply voltage
X5	PS/2	GN/YE	GND	Mass connected to protective earth
X6	PS/2	PK	KB_CLK	Keyboard clock signal
X7	PS/2	GR	KB_DATA	Keyboard data signal
X8	PS/2	BU	MS_CLK	Mouse clock signal
X9	PS/2	RD	MS_DATA	Mouse data signal

- Make the connection between the POLARIS Zero Client and the keyboard.
  - Connection by means of a 1.80-metre-long connection cable
  - Keyboard and mouse Type 05-0068-0163
  - Keyboard and trackball/joystick Type 05-0068-0172
  - Keyboard and touchpad Type 05-0068-0183
- (Optional: 3-metre-long connection cable)

## 5.6.3 Power-limited USB interface for memory stick

### USB socket, 4-pole, Type A

The power-limited USB interface (max. 100 mA), socket type A is for the use of input devices (USB mouse and USB keyboard).

**⚠ DANGER**

**Do not insert the memory stick in an explosive atmosphere.  
 There is a risk of fatal injury in an explosive atmosphere!**

► While the memory stick is inserted, the terminal compartment must remain closed during operation in an explosive atmosphere.

## 5.7 EMC (Electromagnetic Compatibility)

This is a class A unit and can cause radio interference in residential areas; if it does, the owner/managing operator may be required to implement suitable measures and pay for loss or damage.

Only shielded conductors may be used as connecting conductors. This applies both to the data line and to all other conductors too.

The data lines must be stranded in pairs.

Example 2 x 2 x 0.75 mm<sup>2</sup> LIYCY TP.

As far as possible, separate conductors should be used for power supply and data.

### 5.7.1 Voltage Supply (AC and DC Variants)

To supply voltage to the DC variant, it is necessary to use a regulated power supply unit with a power level of at least 5 A. The voltage supply at the place of installation may neither exceed nor drop below DC 24 V ± 10 %. Observe the voltage drop on the supply cable and correct if necessary.

The voltage drop in the DC variant of the supply line is calculated with the following formula:

$\Delta U$	Voltage drop on the supply line at power supply voltage of DC 24 V	Max. 2.4 V
$\Delta U$	Voltage drop on the supply line with maximum permissible mains adapter overvoltage DC 24 V +10 % (26.4 V)	Max. 4.8 V (until 10% undervoltage is achieved)
$I$	Electricity for a POLARIS Zero Client	At least 4 A
$A$	Cable cross-section of the supply line	
$\kappa$	Specific conductance of copper	$56 \frac{m}{\Omega \cdot mm^2}$
$l$	Length of the supply line (consider both the outgoing and return line)	

$$R = \frac{l}{\kappa \cdot A} \quad R = \frac{\Delta U}{I} \quad \Delta U = \frac{l}{\kappa \cdot A} \cdot I$$

If the voltage drop cannot be balanced out or the calculation produces excessive cable cross-sections, a separate approved mains adapter must be installed near the installation site.

Example: pressure-tight encapsulation or non-ex area on the outside of the building.

As a result of the connection of the power supply to the POLARIS, the earth for the power supply is connected to the PE. It is essential to ensure that the earth for the power supply on the POLARIS, if this is not electrically isolated, indicates no potential difference to the PE/PA.

### 5.7.2 Back-up fuse

In the DC variant The POLARIS REMOTE Zero Client series is protected internally by a 4-A time-lag fuse and in the AC variant it is protected by a 1.6 A time-lag fuse. Voltage dips or undervoltage can blow the fuse.

We recommend protecting the POLARIS with an upstream fuse to prevent blowing the fuse inside the device. Only BARTEC can change the internal fuse.  
Upstream fuse for AC: 1.6 A quick-acting / DC: 4 A quick-acting.

### 5.7.3 Interference suppression

Certain basic measures must be taken to ensure freedom from interference when the POLARIS are installed:

- The interference voltages coupled into the device via power, data and signal line and the electrostatic voltage caused by contact are to be dissipated through the equipotential bonding.
- The installation point should be as far as possible away from fields of electromagnetic interference. This is especially important if there are frequency converters in the vicinity. Under certain circumstances will it be advisable to set up partitions to isolate the graphic display from interference.
- If inductive devices are fitted in the vicinity (e.g. contactor, relay or solenoid coils), especially if they are powered from the same source, protective circuits (e.g. RC elements) must be installed.
- Power supply and data cables must be laid so as to avoid interference. This can be achieved, for example, by avoiding laying such cables in close proximity to high-current carrying cables.

### 5.7.4 Shielding

- Only cables with braided shielding should be used (recommended cover density > 80 %).
- Sheet shielding should not be used.
- Generally, connection of the shielding at both ends results in optimum damping of all interference frequencies.
- Connection of the shielding at one side only may be more advisable if a difference in potential exists and no equipotential bonding cable can be laid.

### 5.7.5 Connection of shielding

A low impedance connection to the circuit protective conductor is important to ensure a low current fault path. When sub-D connectors are used, the shielding should always be connected to the metal casing of the sub-D plug.

The plug casing of some controllers is not always well connected to earth. In such cases it may prove advantageous to insulate the shielding from the sub-D plug of the controller and connect it directly to the protective earth conductor by means of a cable that should be kept as short as possible (0.75 mm<sup>2</sup> ... 1.5 mm<sup>2</sup>).

### 5.7.6 Examples of Shielding Connections

#### Double-sided shield connection on the connecting cables:

Illustration 15: Example of double-sided shield connection

Generally, connection of the shielding at both ends results in optimum damping of all interference frequencies. This method is to be recommended when there is good equipotential bonding between the individual units. In such cases it is possible to make use of the controller's voltage supply cable even if this is not electrically isolated.

#### Single-sided shield connection on the connecting cables:

Illustration 16: Example of single-sided shield connection

Connection of the shielding at one end only is recommended when there is inadequate equipotential bonding, or none at all. In such cases an electrically isolated power supply unit must be used. Before the equipment goes into service the directions from the controller manufacturer regarding proper assembly and operation must be read carefully. They should then be applied taking full account of the recommendations we make here.

### 5.7.7 Ethernet

## 6. Commissioning

For electrical systems the relevant installation and operating specifications (e.g. Directives 99/92/EC and 94/9/EC, BetrSichV and the applicable national ordinances, EN 60079-14 and the DIN VDE 0100 series) must be observed.

The operator of an electrical system in a hazardous environment must keep the operating equipment in an orderly condition, operate it correctly, monitor it and do the required maintenance and repairs.

Before commissioning the devices, check that all components and documents are there.

### 6.1 Final Inspection

#### Check the following requirements before commissioning the device:

Only open the terminal compartment with terminals for the supply and data line(s) once it has been ensured that no potentially explosive atmosphere is present and that the power supply has been turned off.

- ▶ Has the reinforcement frame between the bracket and enclosure been inserted?
- ▶ Is there no damage to seals, cable connections or glass panel?
- ▶ Are the supply and data line(s) correctly wired?
- ▶ Have the supply and data line(s) been tightened in the screw terminals?
- ▶ Are all terminal compartments closed?
- ▶ Have all cable glands been tightened and all open cable entries closed with blanking plugs?

Only start the POLARIS (if a potentially explosive atmosphere is present) once the final inspection has been carried out.

#### ATTENTION

##### POLARIS with CFL backlighting:

##### Damage to property resulting from failure to comply with ambient conditions!

Once the heating is switched on, the POLARIS can be used at ambient temperatures from -20 °C to +50 °C.

- ▶ Observe the storage temperatures and protect POLARIS from moisture.
- ▶ If the ambient temperature is under 0 °C, the heating must be put on 24 hours before the POLARIS is put into operation.
- ▶ If the POLARIS is switched off at ambient temperatures under 0 °C, an advance heating time of 24 hours must be observed again.

Once the final inspection has been carried out, the device can be put into operation.

The POLARIS series does not have any ON/OFF switch.

## 6.2 Zero Client operating system

After booting the device for the first time, it is necessary to have the configurations of the device set by the administrator.

The "Administrator settings" description is provided in a separate document and is only placed at the disposal of the operator of the system.

The operating system based on Windows 7 Embedded Standard is pre-installed on the device and permits unrestricted use. The licence sticker for the operating system is located on the rear side of the POLARIS, next to the type plate.

In accordance with the licence for Windows Embedded operating systems, it is not permitted to use this system as an office PC.

The operating system is an Ultra-ThinClient or ZeroClient configuration. The partition with the operating system is protected from manipulation and changes by the user or viruses and similar through a write filter (EWF). In addition, a special BARTEC ZeroClient Shell application has been integrated into the existing infrastructure which limits the device functions even more.

### 6.2.1 General remarks

ZeroClient Shell is a desktop alternative in tile design. The functional scope of the Shell has been greatly minimised compared to the Windows Explorer desktop. Access is facilitated only to specific functions in the operating system. These functions are selected by clicking on a tile. Every function tile has a symbol and lettering as for Windows Explorer. All tiles relevant to work processes are grouped in the lower area of the Shell.

### 6.2.2 Functions

The standard mode of Shell is the user mode. The user mode is the minimum configuration required for the working processes of the user.

Illustration 17:: User mode

Tiles are located in the lower area which start applications for access to the terminal server or basic functions (e.g. reboot) of the device.

### 6.2.3 Description of functions

Symbols	Name	Function
	RDP	Selection of remote desktop connection client (RDP)
	Reboot	Reboot of the device

### 6.2.4 RAM status

The Shell monitors the RAM status of the device in the background with activated EWF. The EWF prevents write access to the protected drive (C:\) by diverting to an overlay located in the RAM memory. If the RAM memory is full during intensive work, a corresponding mask will appear. The mask contains information on the current RAM status and offers the possibility to reboot the device directly.

Illustration 18:: RAM status mask

Notify the system operator that the device must be rebooted soon.

The operating system is an Ultra-Thin-Client or Zero-Client configuration. The partition with the operating system is protected by write filter (EWF) from manipulation and changes by users or viruses or similar. A special BARTEC Zero ClientShell application is

## 6.3 Touch Screen

In the device variants with touch screen, the touch screen software is pre-installed already.

## 7. Faults and Troubleshooting

Fault	Possible cause	Remedy
<b>Nothing is shown on the display</b>	No power supply present	Check connection of the power supply
	External back-up fuse has tripped	Check fuse
	Internal fuse has tripped	Return to the manufacturer
	Backlighting faulty	Return to the manufacturer Replace the backlighting
	Device malfunction	Return to the manufacturer
<b>No current consumption</b>	No power supply present	Check connection of the power supply
	External back-up fuse has tripped	Check the fuse
	Internal fuse has tripped	Return to the manufacturer
	Device malfunction	Return to the manufacturer
<b>Display turns on and off constantly</b>	Power supply is too low	Check diameter and length of cable, >>> see Chapter 5.7
<b>Display always has stripes</b>	Display is defective or the device doesn't boot up	Return to the manufacturer
<b>Dark background</b>	The backlighting is coming to the end of its service life	Return to the manufacturer Replace the backlighting
	Power Save activated	Press any button
<b>Touchscreen not working</b>	Driver deactivated Driver not installed	Check driver installation or install a driver
<b>Mouse cursor and point of contact on the screen do not agree</b>	Touchscreen calibrated incorrectly	Calibrate touchscreen

## 8. Maintenance, Inspection, Repair

Only trained and qualified personnel may commission and do maintenance work on the POLARIS! Trained qualified personnel are people who are familiar with the installation, assembly, commissioning and operation of the POLARIS, have been instructed about the risks and have the appropriate qualifications by virtue of the work they do.

### 8.1 Maintenance intervals

The mechanical status of the devices should be checked at regular intervals. The length of the maintenance intervals depends on the ambient conditions. We recommend checking at least once a year. Regular maintenance is not necessary if operated appropriately in conformance with the installation instructions and with due consideration to the ambient conditions.

#### DANGER

**Prevent electrostatic charging in hazardous (potentially explosive) areas.**

**There is a risk of a fatal injury in an explosive atmosphere!**

- Take devices out of hazardous areas before wiping them dry or cleaning them!

#### ATTENTION

**There is a risk of condensation forming when installed outside. Damage to property may occur if this is not checked!**

- Regularly check the POLARIS for the formation of condensation.

### 8.2 Inspection

Under EN 60079-17, EN 60079-19, the owner/ managing operator of electrical installations in hazardous areas is obliged to have these installations checked by a qualified electrician to ensure that they are in a proper condition.

## 8.3 Maintenance and Repair Work

Adhere to the applicable regulations under Directive 99/92/EC, EN 60079-17, EN 60079-19 when servicing, doing maintenance work on and testing associated operating equipment!

Assembly/disassembly, operating and maintenance work may be done only by trained specialists. The statutory rules and other binding directives on workplace safety, accident prevention and environmental protection must be observed.

### 8.3.1 Instructions for Repairs

If you wish to send in a defective device for repair, please read the RMA procedure guidance first. Then fill in and sign the RMA (Return Merchandise Authorisation) form and send it to our "Retouren Center".

E-mail: [services@bartec.de](mailto:services@bartec.de)

Fax: +49 7931 597-119

We cannot guarantee any contractually agreed processing times for devices that are sent in without an RMA number.

The RMA guide and the RMA form are available on our homepage for downloading.

<http://www.bartec.de>

> Quality and culture

> RMA form

Have you any questions? Write us an e-mail or call us.

E-mail: [services@bartec.de](mailto:services@bartec.de)

Phone: +49 7931 597-444

## 9. Disposal

The component of the POLARIS contains metal, plastic parts and electronic components.

Our devices are intended as professional electric devices for business use only, referred to as B2B devices under the WEEE-Directive. The WEEE directive sets the framework for waste electric and electronic equipment handling procedures which are to apply throughout the EU. This means that you are not permitted to dispose of this equipment in normal household refuse. It should not be given to the collection sites set up by the public waste management authorities either but instead it should be disposed of in a separate collection in an environmentally sound manner.

Any product we supply can be returned by our customers to us when the time has come to dispose of it. We will ensure that it is disposed of in accordance with the respective applicable statutory regulations.

The sender pays the costs of the dispatch/packaging.

## 10. Dispatch and Packaging Instructions

### ATTENTION

#### **Sensitive Devices! Damage to property due to incorrect packaging!**

- ▶ Take the device's maximum weight into account when selecting the packaging and mode of transport.
- ▶ Use the original packaging for transportation.

## 11. Accessories, Spare Parts

Included in the scope of the delivery:

Please insert correct code.

## 13. Additional Information

### Resistance list – polyester front foil **POLARIS series**

**BARTEC**

Page 1 of 1

The polyester front foil material used for the POLARIS series in accordance with DIN 42115, section 2, is resistant against the testing material specified as follows:

#### Alcohols

Ethyl alcohol  
 Cyclohexanone  
 Glycol  
 Glycerol  
 Isopropanol  
 Methanol

#### Hydrocarbons

Aliphatic hydrocarbons  
 General  
 Benzine  
 Benzene  
 Toluene  
 Xylene

#### Chlorinated hydrocarbons

Chlorofluorocarbon  
 Perchloroethylene  
 III-trichloroethane  
 Trichloroethylene

#### Ester

Ethyl acetate

#### Other organic solvents

Aether  
 Dimethyl formamide  
 Dioxane

#### Acids

Formic acid < 50 %  
 Acetic acid  
 Phosphoric acid < 30 %  
 Hydrochloric acid ≤ 10 %  
 Nitric acid ≤ 10 %

#### Aldehydes

Acetaldehyde  
 Formaldehyde

#### Caustic solutions

Ammonia < 2 %  
 Caustic soda < 2 %

#### Saline solutions

Alkalicarbonate  
 Bichromate  
 Prussiate of potash

#### Different substances

Molecular chlorine  
 Liquid cresolphene soaps  
 Oxygen  
 Tricresyl phosphate  
 Water < 100 °C  
 Hydrogen peroxide < 25 %

#### Detergents, scavengers and cleaning agents

Potassium soap  
 Detergent solutions (tenside)  
 Fabric softeners

#### Technical oils and fats

Cutting emulsion  
 Diesel oil  
 Varnish  
 Heating oil  
 Paraffin oil  
 Ricinus oil  
 Silicone oil  
 Turpentine oil and turpentine oil substitute

(Where not stated otherwise: concentration = 100%)

**Polyester membranes have a limited resistance to UV light and should therefore not be exposed to direct sunlight for extended periods of time.**
